

RESIDENTIAL ALLOCATIONS

(Includes Single Family Residential, Multi-family, and Master Meter customers)

Indoor: Dwelling units X HCF = HCF

Each dwelling unit will be allocated approximately 6 HCF per month.

- This is based on Census data for Carpinteria, and urban water use objectives set by the State of California.

+

Outdoor - Summer: Irrigated SQFT on property In 1,000s X HCF = HCF

For this worksheet, estimate the irrigated area on your property in 1,000s of square feet (SQFT) – rounded to the nearest thousand.

- For example, for 1,700 square feet, write 2.
- For example, for 600 square feet, write 1.
- For example, for 4,200 square feet, write 4.

=

Each 1000 SQFT of irrigated area can use about 4 HCF of water in the summer.

- Irrigated area on your property includes everything you water (e.g., front, back, side yards)
- This is based on efficient irrigation practices set by the State of California and local weather trends.
- Note that newer developments are limited to about 3 HCF per 1000 SQFT of irrigated landscaping.

TOTAL Monthly allocation (indoor + outdoor) HCF
